

Michael Smith

Senior Full-Stack Software Engineer

Johnson City, Tennessee, United States · me@michaelynnsmith.com · [linkedin.com/in/michael-lynn-smith-2021](https://www.linkedin.com/in/michael-lynn-smith-2021)

SUMMARY

Senior full-stack engineer with 6+ years building and shipping production applications end to end—from public-facing kiosks to a vectorized job-matching platform. I thrive on small, high-ownership teams: taking features from architecture through deployment, making pragmatic technical calls without heavy process, and shipping independently. My work consistently ties engineering to real outcomes—faster delivery, better user experience, and less manual overhead—across TypeScript, React/Next.js, Python/Django, and PHP.

SKILLS

Languages: TypeScript, JavaScript, PHP, Python, Dart

Frontend: React, React Native, Next.js, Svelte, Tailwind CSS, Flutter

Backend & Data: Node.js, Django, REST APIs, SOAP APIs, pgvector, Drupal

Architecture & Practices: Full-stack ownership, system design, reusable architectural patterns, third-party integration, technical mentoring, pair programming

EXPERIENCE

Senior Software Engineer — Creative Energy

May 2023 – Present · Johnson City–Kingsport–Bristol Area

- Own full-stack development for tourism-focused interactive kiosks, driving measurable increases in regional visitor engagement.
- Established reusable project templates and architectural patterns adopted across the team, cutting new-project setup time and standardizing engineering practices.
- Lead maintenance and modernization of Drupal/PHP websites, balancing legacy stability with ongoing improvement.
- Connected third-party services (Google Maps, weather APIs) to extend kiosk functionality and interactivity.
- Mentor a junior developer through documented workflows and pair programming, improving onboarding speed and code quality across the team.

Software Engineer — 24 Hour Self Storage

August 2020 – November 2022 · Johnson City–Kingsport–Bristol Area

- Built and maintained the company website and internal tooling with TypeScript, PHP, and Python, driving a meaningful increase in online conversions.
- Designed and shipped an automated customer onboarding system integrated with the company's PMS and SMS alerts, enabling 24/7 self-service rentals and substantially reducing manual check-ins.
- Engineered a real-time HVAC monitoring system using temperature/humidity sensors with Trello-based alerting, reducing equipment downtime.
- Streamlined back-office operations by automating recurring processes including billing and access management.
- Consumed and extended legacy SOAP APIs to enable third-party integrations with SiteLink and internal dashboards.

NOTABLE PROJECTS

Maia — Vectorized Job-Matching Platform

Owned the user-facing UI for a job-matching platform that pairs candidates to roles using vector similarity search. Also contributed to the vectorization pipeline and the request-queuing system that powers matching at scale.

Tech: Python, Django, pgvector, TypeScript, React

Touchless Interactive Kiosk — Johnson City Visitors Center

Sole developer. Designed and built a fully touchless, interactive kiosk from the ground up, expanding accessibility for visitors in a public space. Owned the project end to end—architecture through deployment.

Tech: Svelte, TypeScript, Python

🏆 **ADDY Best in Show — advanced to regional competition (full visitors-center installation).**

Immersive Panorama Experience — Johnson City Visitors Center

Supporting engineer (second of two). Contributed to a fully immersive, room-scale panorama driven by a real-time Unity 3D scene, using ZED stereo depth cameras to track visitors' physical positions—letting people interact with the environment simply by moving closer to it, no touch required.

Tech: Unity 3D, C#, ZED SDK (stereo depth cameras)

🏆 **ADDY Best in Show — advanced to regional competition (full visitors-center installation).**

EDUCATION & CONTINUOUS LEARNING

Self-taught software engineer with 6+ years of hands-on, self-directed learning—continuously expanding my depth across full-stack web development, 3D/interactive systems, and applied AI (vector search and matching).
